

# DI WATER SYSTEM

## Say goodbye to spots, streaks and high chemical usage!

Truly clean water only needs about ½ of the cleaning chemicals to do the same job. This means **big money** savings and much faster working times! How can you effectively remove minerals from water to take advantage of these benefits? Well, there are several ways- each has different benefits and drawbacks: Say goodbye to spots, streaks and high chemical usage! Spots, streaks, and stiff fibers left behind after cleaning are all caused by hard water. Hard water is full of dissolved solid minerals, similar to sugar dissolved in water. You can't see these minerals until the water has evaporated, leaving behind ugly marks on cars, glass, marble, and other solid surfaces. Even more mineral residue is left behind on fibers such as carpet, rugs, and fabrics, leaving them stiff and prone to rapid resoiling. Both of these problems can be prevented by removing the dissolved minerals from the water before the cleaning process even starts.

- While similar to water softeners, deionized water units are able to remove ALL of minerals. Their superior capabilities faster working times, and will cut squiggling of surfaces. They are a great investment with a quick return in both time and chemical savings. With these happier customers

*these problematic yield spot free rinses, chemical usage in half, without squiggling of surfaces. They are a great investment with a quick return in both stellar results you're bound to see much*

## Re-Charge

Re-Charge 27 years ago PowerPlus invented the single-tank self-recharging water softener system for cleaners, which allowed them to self-recharge their tanks fast, with costs less than \$1 per tank. We applied this same innovative thinking to our DI Water system. This means no rental fees, not having to use dirty water while waiting for some company to come and exchange your tanks, and no more worries about how much water you use! PowerPlus' DI Water system comes with everything you need to self-recharge your tanks whenever you want!
