

auto pump-out

There's gold in that carpet! One of the primary obstacles professional cleaners face in selling scheduled cleaning plans to their customers is convincing the customer of their need for regular cleaning. If you could just show them what you just extracted from their carpet, they would be sold. With the Auto Pump-Out from Powerplus you can.

Cleaning TV. Imagine being able to offer your customers the opportunity to watch in real-time the dirt, grime, urine, vomit, etc. you are extracting from their carpet. Simply connect your Auto Pump-Out unit inline with your vacuum hose and mount it on the stand (included) outside the door to their home. Invite them to pull up a chair and watch the show through the Auto Pump-Out's high-strength transparent lid (you might want to offer them a bag in case they get nauseous while viewing.) No more customers following you around the house or standing over your shoulder. When you are done, customers will ask how soon you can come back to clean again and refer you to their neighbors.

Legal Protection. Most cities and counties have ordinances prohibiting the disposal of waste water directly into the street or storm drain. Many of these ordinances assign hefty fines (up to \$10,000 per violation.) With the Auto Pump-Out, you can safely and legally dispose of waste water while dramatically reducing the number of times you will need to drain and clean your waste tank. Simply connect a garden hose to the Auto Pump-Out's filtered water output valve and insert the end of the hose in the customer's toilet or washing machine drain. The filter collects sediment allowing filtered waste water to be properly and easily disposed of – without the legal worries. Improve customer satisfaction, build recurring business opportunities and protect yourself from legal action with the Auto Pump-Out from Powerplus.

How does the Auto Pump-Out work?

Explanation: The Auto Pump-Out connects inline with your vacuum hose. The 1,500 gallon per hour pump pulls waste water through the stainless steel filter and pushes it out the filtered water output valve. The Auto-Pump disposes almost all of the waste water before it enters the waste tank enabling you to work all day without stopping to drain your tank.
